DESCRIPCIÓN DEL PRODUCTO

Critical care in obstetrics is an upcoming specialty in the developing countries. This book is first of its kind as there are very few books written on this subject with the South East Asian perspective. The book discusses various aspects of critical care in obstetrics starting from the basic principles, physiology, ethics, monitoring and organization of a critical care unit. The various chapters cover management of life threatening illnesses involving various organ systems of the body of a pregnant woman. Furthermore, the management of a pregnant woman is unique as it involves not only management of the patient but the developing fetus in her womb as well. This book aims to help the obstetricians, postgraduate students and critical care providers with the management protocols in dealing with critically ill pregnant women.

- Contains case-based clinical information
- Comprehensive yet easy to consult, updated and written by experts
- A unique and helpful resource for gynecologists and obstetricians

Índice de Principles of Critical Care in Obstetrics Volúmen II 1th edition
